

Project Design Phase-II

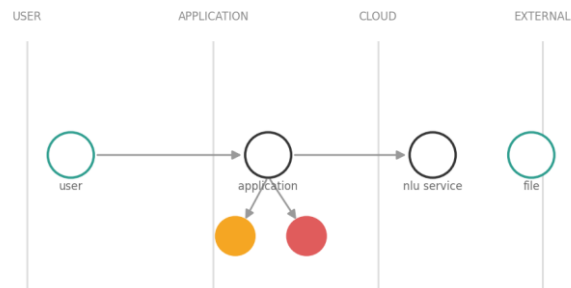

Data Flow Diagram & User Stories

Date	31 January 2025
Project Name	Employee Raise Issue – Record Producer & Service Portal Widget
Maximum Marks	4 Marks

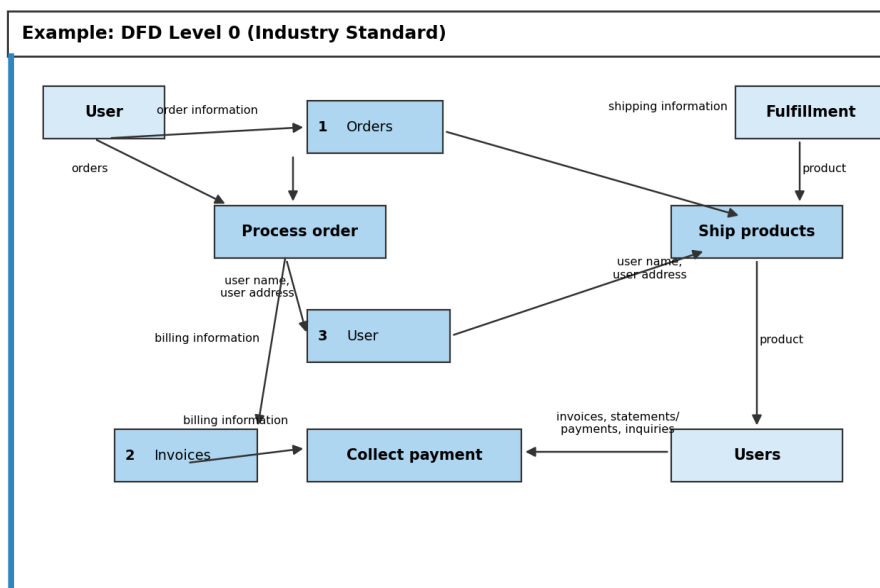

Data Flow Diagrams:

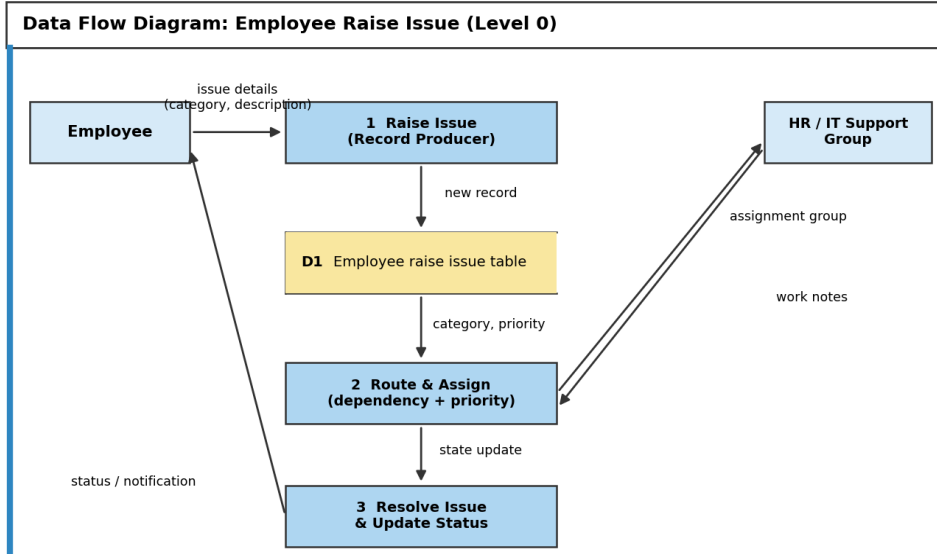

A Data Flow Diagram (DFD) is a traditional visual representation of the information flows within a system. A neat and clear DFD can depict the right amount of the system requirement graphically. It shows how data enters and leaves the system, what changes the information, and where data is stored.

Example: [\(Simplified\)](#)

1. User configures credentials for the Watson Natural Language Understanding service and starts the app.
2. User selects data file to process and load.
3. Apache Tika extracts text from the data file.
4. Extracted text is passed to Watson NLU for enrichment.
5. Enriched data is visualized in the UI using the D3.js library.

User Stories:

Use the below template to list all the user stories for the product.

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Employee (Service Portal user)	Issue Submission	USN-1	As an employee, I can raise a workplace issue by selecting a category, subcategory and short description on the Employee Raise Issue Record Producer.	Issue record is created in the Employee raise issue table with the details I entered	High	Sprint-1
		USN-2	As an employee, I can select a subcategory that is filtered based on the category I chose (e.g. Network → VPN).	Subcategory list only shows options relevant to the selected category	High	Sprint-1
		USN-3	As an employee, I must enter a short description before I can submit the form.	Submit is blocked with a message until short description is filled	Medium	Sprint-1
		USN-4	As an employee, I can attach a screenshot or document to support my issue.	Attachment is saved against the created record	Low	Sprint-2
	Issue Tracking	USN-5	As an employee, I can see a confirmation once my issue is submitted.	A confirmation message/number is shown after submit	High	Sprint-1
		USN-6	As an employee, I can view the status of my past issues from the portal.	"My Issues" widget lists my issues with current state	Medium	Sprint-2
HR / IT Support (Assignment group member)	Issue Routing	USN-7	As a support agent, I want issues auto-assigned to my group based on category so that I only see relevant issues.	New issue records are routed to the correct assignment group automatically	High	Sprint-1
		USN-8	As a support agent, I want each issue to have a priority based on impact and urgency.	Priority field is populated on record creation	Medium	Sprint-2
	Issue Resolution	USN-9	As a support agent, I can update the state of an issue (New, In progress, Resolved, Closed).	State change is saved and visible to the employee	High	Sprint-1

User Type	Functional Requirement (Epic)	User Story Number	User Story / Task	Acceptance criteria	Priority	Release
Administrator	Configuration	USN-10	As an admin, I can configure the Category–Subcategory dependency and UI Policies.	Dependency and mandatory rules apply on the live form	High	Sprint-1
