

Project Design Phase-II

Solution Requirements (Functional & Non-functional)

Date	31 January 2025
Project Name	Employee Raise Issue – Record Producer & Service Portal Widget
Maximum Marks	4 Marks

Functional Requirements:

Following are the functional requirements of the proposed solution.

FR No.	Functional Requirement (Epic)	Sub Requirement (Story / Sub-Task)
FR-1	Issue Submission	• Submit an issue via the Employee Raise Issue Record Producer on the Service Portal • Attach supporting files or screenshots to an issue
FR-2	Field Validation & Dependency	• Category → Subcategory dependent choice list • Mandatory short description enforced via UI Policy
FR-3	Issue Routing & Assignment	• Auto-assign new issues to an HR/IT group based on category • Auto-calculate priority from impact and urgency
FR-4	Issue Tracking & Notification	• View issue status via a "My Issues" widget on the portal • Notify the employee by email when the issue state changes

Non-functional Requirements:

Following are the non-functional requirements of the proposed solution.

FR No.	Non-Functional Requirement	Description
NFR-1	Usability	The Record Producer and Service Portal widgets should be simple and guided enough to use without training.
NFR-2	Security	Role-based ACLs ensure employees can view only their own issues, while HR/IT see records for their assignment group.
NFR-3	Reliability	Issue submissions and state changes should not fail or lose data, and notifications should be delivered consistently.
NFR-4	Performance	The portal page, Record Producer and dependent dropdowns should respond within a few seconds under normal load.
NFR-5	Availability	The Service Portal and Record Producer should remain accessible during business hours with minimal downtime.
NFR-6	Scalability	The table, workflow and assignment logic should handle a growing number of employees and issues without redesign.
